DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frey (6,039,336) in view of Smith et al. (6,241,266). Frey teaches welding an axle to a pivot arm that attaches to an axle, which extends greater than halfway about the axle (Figure 1, Items 3 and 7); but does not specifically teach the use of an axle connector. Smith et al. teaches welding an axle connector to an axle, without first pressing the axle connector onto the axle from an end of the axle and without using a clamp to hold the axle connector in contact with the axle; by elastically deforming the axle connector by enlarging the inner dimension of the axle connector so that the axle connector inner dimension is larger than an outer dimension of the axle at a location is held in contact with the axle during the welding, wherein no clearance exists (Figure 15, Item 232; Column 3, Lines 44-60; and Column 14, Lines 25-Column 15, Line 31); and welding the axle connector to a body (abstract); and welding to the pivot arm after welding the axle to the connector (Figure 16, Item 232). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the axle connection method of Frey to utilize the welding the axle connector and method as taught by Smith et al. in order to ensure the prevention of any translational or rotational movement (see Smith et al. Column 3, Lines 1-6 and abstract).
